Rules In Case of Fire

Familiarize yourself with the location of windows and natural escapes.

Learn the position of all stairways, particularly the top landing and scuttle to the roof.

Keep the doors of rooms shut.

Open windows from the top.

Wet a towel, stuff it in the mouth, breathe through it instead of nose, so as not to inhale smoke.

If room fills with smoke keep close to floor and crawl along by the walls to the window.

NEVER go to the roof, unless as a last resort and you know there is escape to adjoining buildings.

NEVER jump through flames in a building without covering the head with a blanket or heavy clothing.

Never get excited; try to recall the means of exit.

WHAT HOUSEKEEPERS SHOULD REMEMBER

That cold rain water and soap will remove machine grease from washable fabrics.

That fish may be scaled much easier by first dipping them into boiling water for a minute.

That milk which has changed may be sweetened or rendered fit by stirring in a little soda.

That boiling starch is much improved by the addition of sperm or salt or both or a little gum arabic dissolved.

That a teaspoonful of turpentine, boiled with your white clothes will greatly aid the whitening process.

That kerosene will soften boots and shoes that have been hardened by water, and will render them as pliable as new.

That thoroughly wetting the hair once or twice with a solution of salt and water will keep it from falling out.

That salt fish are quickest and best freshened by soaking in sour milk.

That one teaspoonful of ammonia to a teacup of water applied with a rag will clean silver or gold jewelry perfectly.

That salt will curdle new milk, hence, in preparing porridge, gravies, etc, salt should not be added until the dish is prepared.

That paint stains that are dry and old may be removed from cotton or woolen goods with chloroform. It is a good plan to first cover the spot with olive oil or butter.

That clean boiling water will remove tea stains; pour the water through the stain and thus prevent its spreading over the fabric.

That by applying kerosene with a rag when you are about to put your stoves away for the summer, will prevent them from rusting. Treat your farming implements in the same way before you lay them aside in the fall.

That a good agency for keeping the air of the cellar sweet and wholesome is whitewash made of good white lime and water only. The addition of glue or size, or anything of this class, is only a damage by furnishing organic matter to speedily putrify. The use of lime in whitewash is not simply to give a white color, but it greatly promotes the complete oxidation of effluvia in the cellar air. Any vapors that contain combined nitrogen in the unoxidized form contributes powerfully to the development of disease germs.
